

Work location: Palackého 174, 612 00 Brno

Our **National Reference Laboratory (NRL)** conducts residual analyses of prohibited substances in biological matrices of animal origin and feed. The accredited methods applied are listed in [Accreditation](#) section.

The NRL is an official laboratory for providing residue analyses within National Residue Control Plan according to Regulation (EU) 2017/625 on Official Controls (former Council Directive 96/23/EC) in cooperation with State Veterinary Administration of Czech Republic.

The analytical techniques used in our laboratory (GC-MS a LC-MS/MS) and methods validated according to Commission Decision 2002/657/EC fulfil the EU requirements for unambiguous and reliable results for official control purposes.
